

1.1.5 ENVIRONMENTAL ANALYSIS — CLAIM OF CATEGORICAL EXCLUSION

AMLOZA (Amlodipine Besylate Tablets, USP) 5 mg / 10 mg — ANDA

Pursuant to 21 CFR 25.31(b), the applicant claims a categorical exclusion from the requirement to prepare an environmental assessment for this application.

Regulatory basis	21 CFR 25.31(b) — categorical exclusion for actions that increase the use of an active moiety, provided the increase in use of the substance is not expected to significantly affect the quality of the human environment
Basis for exclusion claim	AMLOZA is a generic version of an already-approved and widely marketed active ingredient (amlodipine besylate, RLD: Norvasc®, approved 1987); approval of this ANDA would not be expected to significantly increase the total quantity of amlodipine besylate released into the environment beyond levels already associated with the marketed RLD and existing generic amlodipine besylate products
Extraordinary circumstances	No extraordinary circumstances under 21 CFR 25.21 are known to the applicant that would affect the significance of the environmental impact of this action

Accordingly, no environmental assessment or environmental impact statement is submitted with this application.

Portfolio Note: A categorical exclusion claim under 21 CFR 25.31(b) is standard and routine for generic drug applications involving an already-approved active moiety at comparable use levels; it does not require submission of environmental study data, consistent with the position taken here.

ACADEMIC PORTFOLIO EXERCISE — NOT FOR REGULATORY SUBMISSION
