

CONTAINER AND CARTON LABELING — CONTENT SPECIFICATION

eCTD Section 1.11 | Principal Display Panel — 21 CFR 201.25 (Barcode) & 201.66

This section specifies labeling content required under 21 CFR 201.66; final graphic layout, color artwork, and print-ready files are produced separately by the packaging/artwork design function.

Principal Display Panel - 5 mg

Note: Content below applies to both the immediate container (bottle) label and the outer carton label. Established name "amlodipine besylate" to appear at ≥50% of the proprietary name type size, per 21 CFR 201.10(g)(1). The linear barcode (21 CFR 201.25) is carried primarily on the carton; bottle size may preclude a full linear barcode, consistent with standard packaging practice

AMLOZA
(amlodipine besylate) tablets, for oral use
5 mg Rx only
90 Tablets
NDC 12345-678-90 (placeholder)
Store at 25°C (77°F); excursions permitted to 15°C–30°C (59°F–86°F).
[Company] Pharmaceuticals, [City, State, ZIP], USA
[BARCODE PLACEHOLDER]

Side Panel / Additional Labeling Information (not part of PDP):

Each tablet: Amlodipine besylate equivalent to 5 mg amlodipine
Inactive ingredients: microcrystalline cellulose, anhydrous dibasic calcium phosphate, sodium starch glycolate Type A, magnesium stearate
White, round, biconvex, uncoated tablets.
Lot No.: [XXXXXX] Exp.: MM/YYYY

Note: Same content-specification principles as the 5 mg PDP above apply — established name proportion per 21 CFR 201.10(g)(1) and barcode placement per 21 CFR 201.25.

Side Panel / Additional Labeling Information (not part of PDP):

Each tablet: Amlodipine besylate equivalent to 10 mg amlodipine
Inactive ingredients: microcrystalline cellulose, anhydrous dibasic calcium phosphate, sodium starch glycolate Type A, magnesium stearate
White, round, biconvex, uncoated tablets.
Lot No.: [XXXXXX] Exp.: MM/YYYY

Human Factors / Medication Error Prevention Note

For portfolio purposes, an illustrative layout is shown above for the 5 mg carton only: the 5 mg and 10 mg cartons would use strength-specific visual differentiation - for example, distinct color bands and a prominent, high-contrast strength block on the principal display panel - consistent with FDA human factors and container/carton labeling best practices to reduce the risk of medication-selection errors between strengths.

Portfolio Note: Principal Display Panel content mirrors FDA labeling requirements under 21 CFR 201.66; inactive ingredient and batch-specific information are presented on a side panel, consistent with typical PDP scope. NDC, lot, and barcode are placeholders — real NDC numbers are FDA-assigned per labeler code.

ACADEMIC PORTFOLIO EXERCISE — NOT FOR REGULATORY SUBMISSION
